True or False Statement

- “When you add two odd numbers together the answer is always an odd number.”
 - “If you multiply 2 odd numbers together, the result is odd.”
 - “If you add three even numbers together you always get an odd answer.”
 - “If you share out an odd number of cubes between 4 people, you always get 1 left over.”
- Who is correct? How do you know? Can you give 5 examples that prove your answer?

Find the Difference

Place the numbers 1 to 6 in the circles so that each number is the difference between the two numbers just below it.

Example:  $5 - 2 = 3$

Can you find more than one way to complete the triangle?

Visit <https://nrich.maths.org/6227> for an interactive version.

Ice Cream Investigation

There are four flavours of ice cream: **strawberry, chocolate, mint and vanilla.**

You can put two scoops into each cone. The two scoops can be the same flavour or different. How many different combinations of ice cream can you make?

Show your working out.

Here are 5 coins: 20p, 10p, 5p, 2p, 1p

What amounts of money can be made using these coins?

Write down the amounts and which coins are used.

Show your working out.

For an extra challenge, use these coins below.

£2, £1, 50p, 5p and 2p
