

Exchange Rate Home Learning Challenge

<https://www.bbc.co.uk/bitesize/topics/z8yv4wx/articles/z8nn8mnenge>

Watch the BBC Bitesize video about different currencies and exchange rates.

Here are some exchange rates from countries in North and South America, the table shows how much of the different currencies would be equal to £1.

£1	\$1.20 (US Dollars)
£1	7 Brazilian Real
£1	1006 Chilean Pesos
£1	29 Mexican Pesos

Use the exchange rates above to work out how much these items will be in different currencies. For example, the box of chocolates cost £5. If I was working out how many US Dollars this would be, I could use multiplication, so $5 \times 1.2 = 6$, so I would know that £5 = \$6. You may be able to do some of the calculations mentally, or you may want to use a written method.
